OWNER SAMPLER

WEIGH-A-DAY-A-MONTH

AGRICULTURAL RESEARCH SERVICE, U. S. DEPARTMENT OF AGRICULTURE

*A plan for every size herd*

Dairy-Herd-Improvement Letter

ARS-44-215  
(Vol. 46, No. 2)

May 1970

DHIA PARTICIPATION REPORT, JANUARY 1, 1970<sup>1/</sup>

The National Cooperative Dairy Herd Improvement Program is a composite of the Official DHI (including DHIR), Owner-Sampler, Weigh-a-Day-a-Month (WADAM), and other unofficial recordkeeping plans. For the first time, other unofficial DHI plans are being counted as part of the National Cooperative DHI Program in this annual DHIA Participation Report. This change in procedure has been followed in all tables and in calculating the totals and percentages of herds and cows on test. Therefore, the totals and percentages across recordkeeping plans are not directly comparable to those which have been compiled in past years.

On January 1, 1970, the Program included 59,629 herds with 3,120,143 cows, which is 24.6 percent of the Nation's dairy cow population. The cows were in 1,267 associations with 2,225 supervisors. Official DHI (including DHIR), included 34,308 herds and 2,122,011 cows for an average of 61.9 cows per herd; DHIR included 3,814 herds and 235,829 cows averaging 61.8 cows per herd; and Owner-Sampler included 23,281 herds and 839,343 cows for an average of 36.1 cows per herd. Similar

- - - - -

<sup>1/</sup> Prepared by G. J. King, F. N. Dickinson, C. A. Rampendahl, J. J. Corbin, and A. H. Kienast from data supplied by the State Extension dairymen in charge of DHIA recordkeeping.

Issued July 1970

figures for WADAM were 703 herds, 47,493 cows, and 67.6 cows per herd. The other unofficial plans included 1,337 herds and 111,296 cows for an average of 83.2 cows per herd.

The percentage of the Nation's cows enrolled in Official DHI was 16.7, up from 16.4 percent in 1969. DHIR enrolled 1.9 percent of the Nation's cows, the same percentage enrolled in 1969. Owner-Sampler cows increased to 6.6 percent from 6.5 percent of the Nation's cows in 1969, and WADAM increased to 0.4 percent from 0.3 percent in 1969. Enrollment in other unofficial plans comprised 0.9 percent of the Nation's cows in their first tabulation.

The percentages increased for Official DHI and Owner-Sampler because the U.S. dairy cow population dropped from 13,038,000 January 1, 1969, to 12,689,000 January 1, 1970, a decrease of 349,000. Details of the participation in the various recordkeeping plans are given in tables 4 through 8.

Part of the information in table 1 is presented this year for the first time. It contains a listing of States that have State dairy herd improvement associations and those that hold membership in the National Dairy Herd Improvement Association (NDHIA), Inc. These facts are also shown on the map on page 19. Establishing a State DHIA is important to the development and growth of sound dairy recordkeeping programs in any State. In 1969, three more State-level DHI Associations were formed. Twenty-two States were members of NDHIA, Inc. as of January 1, 1970. The work of Don Voelker, Federal Extension Dairyman for July-December 1969, was most helpful in this development, and Marvin Senger, Federal Extension Dairyman for calendar year 1970, is providing guidance to other States which are in the process of forming State DHI Associations.

The number of counties, associations, and supervisors in the Program have also been included in table 1. The number of counties include only those that have the Official DHI, Owner-Sampler, and/or WADAM plans. Information on additional counties having only other unofficial plans was not available.

Table 2 lists the percentages of all milk cows included

in all recordkeeping plans. It was included in the March 1969 DHI Letter as table 14. This year, the map on page 20 is included to show graphically the data in table 2. The data show California as the only State with more than 50 percent of its cows on test. Five States follow closely with between 40 and 49.9 percent of cows on test; the largest group of States is 16 having between 20 and 29.9 percent of cows on test; five States still have less than 10 percent of their cows on test.

Table 3 summarizes the data for participation in each recordkeeping plan. Footnote 1 gives the titles of the unofficial plans other than Owner-Sampler and WADAM. The titles of these plans by States are listed in table 8, footnotes 4 to 10. Table 3, footnote 4, lists 3,455 herds and 115,409 cows on unofficial recordkeeping plans not under the auspices of the National Program, such as Vocational Agriculture, independent testers, and private testing.

Figures for Official DHI in table 4 indicate that there are fewer herds and cows on test than a year ago. However, herd size increased 1.8 cows per herd. This increase -- to 61.9 cows per herd -- is a doubling in herd size since 1953. More than 36 years were required for such a doubling in herd size to occur before 1953.

Table 5 lists herds and cows on DHIR. These are included in Official DHI as the various plans are tabulated, but are listed in table 5 to show relative numbers and percentages that DHIR recordkeeping comprises. The number of herds and cows on DHIR also decreased in 1969.

Owner-Sampler recordkeeping detailed by State in table 6 also showed losses in herds and cows.

WADAM recordkeeping presented in table 7 showed a different trend as herds on test continued to decrease, but cows on test, having declined by January 1, 1969, rose by January 1, 1970. The cows per herd thus increased from 62.3 on January 1, 1969, to 67.6 on January 1, 1970.

Table 8 is also new this year. It includes the same details for participation in other unofficial plans as tables 4 to 7 do for Official DHI, Owner-Sampler, and WADAM. Its figures show that there are almost twice as many herds and more than twice as many cows on other unofficial plans than on WADAM.

Table 9 has been changed somewhat from the table 5 of former years. The numbers of herds and cows have been omitted; reference to DHIR has been omitted because DHIR records have always been, by definition, 100 percent computer-processed; and figures for other unofficial plans have been added.

Tables 10 to 13 refer to material in the participation report rather than to subjects included last year. The material on lactation records received by USDA, errors, and rejects will be presented in another DHI Letter.

Table 10 is a history of DHI work in the United States since its beginning in 1906. Although the number of associations and supervisors given are for the total National Program, all figures for herds, cows, and production are for Official DHI only.

In table 11, enrollment and production in Official DHI have been compared to the numbers and production of all milk cows in the United States for 14 years -- since the WADAM plan was included in the National Program.

A 14-year summary for the number of cows on test in the various plans and the proportion that each number is of the national dairy herd is given in table 12.

Table 13 is the listing of counties that have 40 percent or more of their cows included in the National Cooperative DHI Program. The percentage of counties having 25 percent or more of their cows on test is given in parentheses at the end of each State's listing.

The data included on unofficial recordkeeping, when compared with unpublished data from previous years, seem to show a trend to dairy recordkeeping plans which are attractive to more dairymen because of cost, convenience, or type of record received. The widespread use of such plans should result in more net income to more dairymen — a primary goal of the National Cooperative DHI Program.

1/ Number of associations and supervisors include all plans.

2/ Estimated.

3/ Date for collecting data changed in 1924 from July 1 to January 1.

4/ Prior to 1957 associations were counted on the basis of supervisor circuits.

5/ National testing year changed in 1960 to begin May 1. These values are averages of 1959 and 1961.

6/ Average production data were not available when this report was compiled.

<sup>1/</sup> Based on succeeding January 1 reports of cows on test in the National Cooperative Dairy Herd Improvement Program.

<sup>2/</sup> Average number of milk cows on farms during year, excluding heifers not yet fresh; estimated by the Statistical Reporting Service (USDA).

<sup>3/</sup> Also included in the national program for this year are 111,296 cows on other unofficial plans, accounting for an additional 0.9 percentage, which raises the proportion of U.S. cows to 24.6 percent.

TABLE 13.--Counties, by State, with 40 percent or more cows included in the National Cooperative Dairy Herd Improvement Program--January 1, 1970  
(Numerals in parentheses at the end of county listing show the percentage of the States' counties that have 25 percent or more of their cows on test.)
